

Connect statrankings to your AI

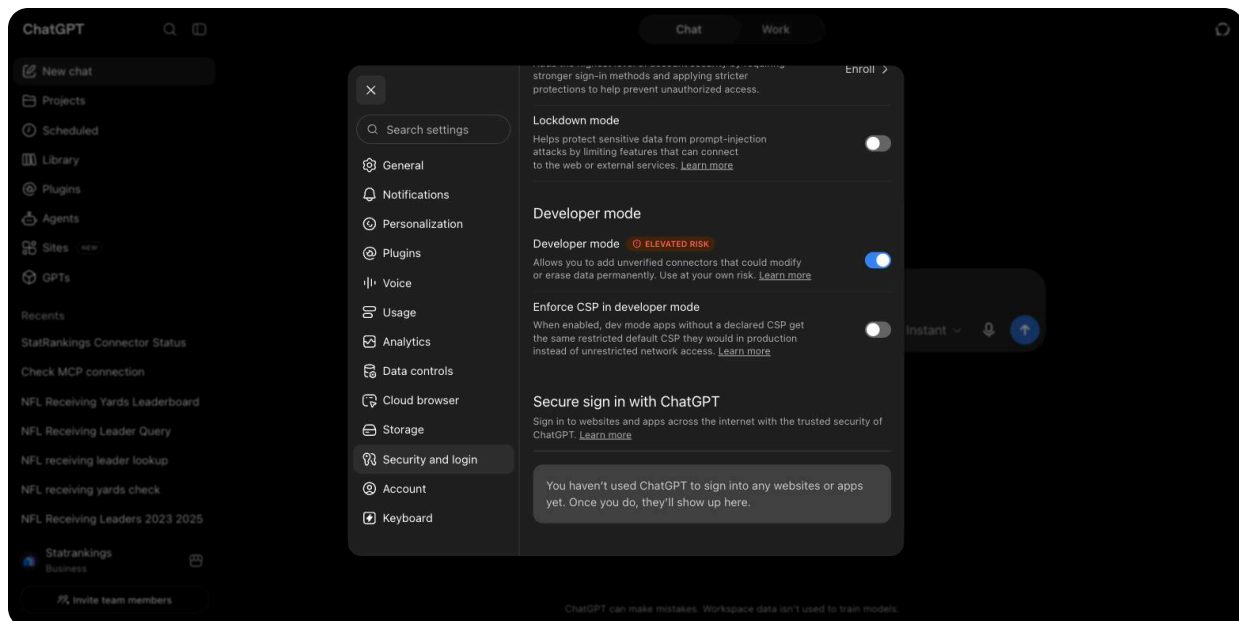

The **statrankings** MCP server gives your AI direct access to our NFL, NBA & CFB statistics: leaderboards, player & team stats, comparisons & profiles, with answers cited to **statrankings** data.

Before you start: you'll need an active **statrankings+** subscription. MCP access is included. During setup, **sign in with the same email as your statrankings+ subscription**; another email has no access. Manage your plan at statrankings.com.

PART 1 Connect the plugin

01 Turn on developer mode

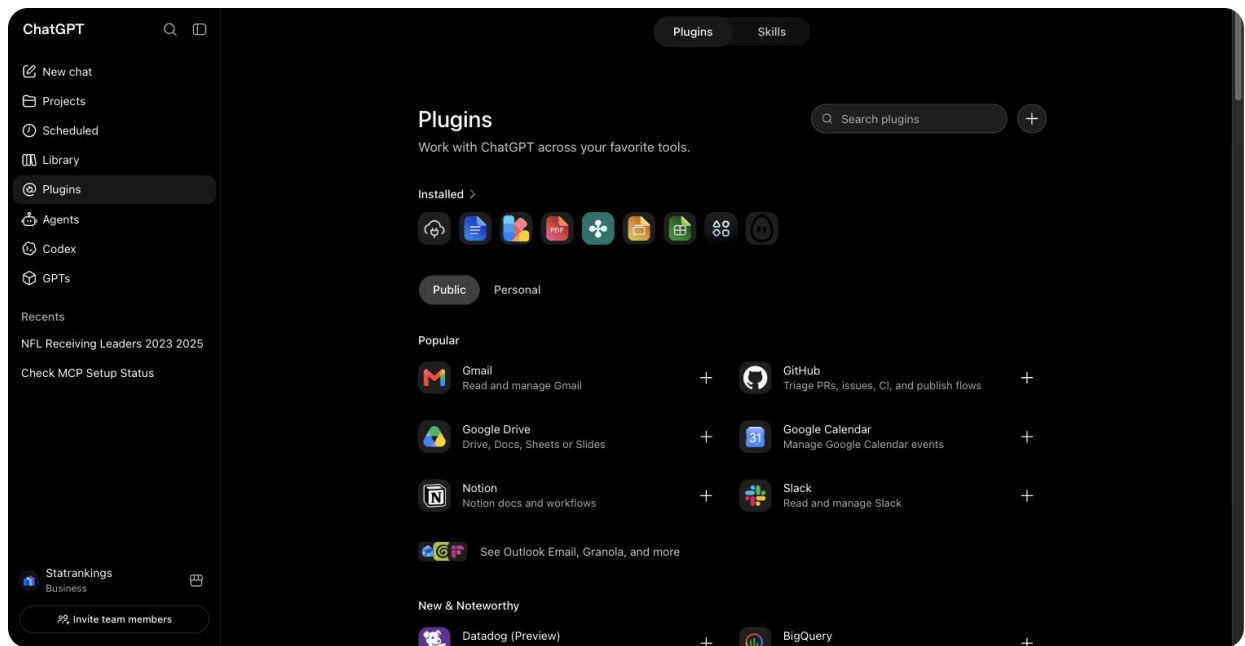

Sign in to ChatGPT at chatgpt.com, open **Settings** → **Security and login** and scroll to **Developer mode**. Switch it on. If it isn't listed, your ChatGPT plan doesn't offer it. Developer mode is what allows ChatGPT to add a custom MCP server. Leave it off and the Plugins page won't offer the connection form at all. You only need to do this once.

Developer mode, under Settings → Security and login. It carries an “elevated risk” badge because it lets you add servers OpenAI hasn't reviewed.

02 Open the Plugins page

In ChatGPT, click **Plugins** in the left sidebar (or go to chatgpt.com/plugins). Then click the **+** button next to the search box, top right.

The Plugins page. The + button opens the New Plugin dialog.

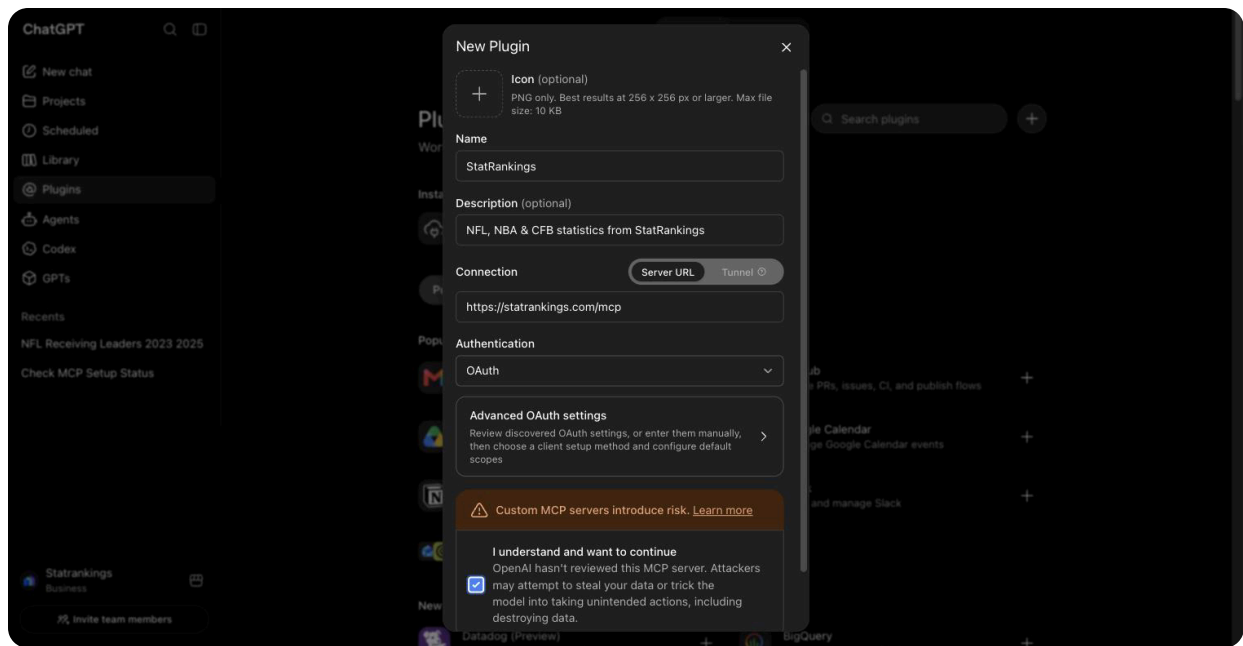

03 Fill in the connection details

In the **New Plugin** dialog, enter the following:

Name	StatRankings
Description	NFL, NBA & CFB statistics from StatRankings (optional)
Connection	Server URL → https://statrankings.com/mcp
Authentication	OAuth (the default, leave “Advanced OAuth settings” alone)

Paste the server URL exactly as shown, ending in **/mcp**, not **statrankings.com/ai** or our homepage, which are web pages rather than MCP servers.

Check **“I understand and want to continue”**, then click **Create**.

The completed dialog. ChatGPT discovers our OAuth settings automatically from the server URL.

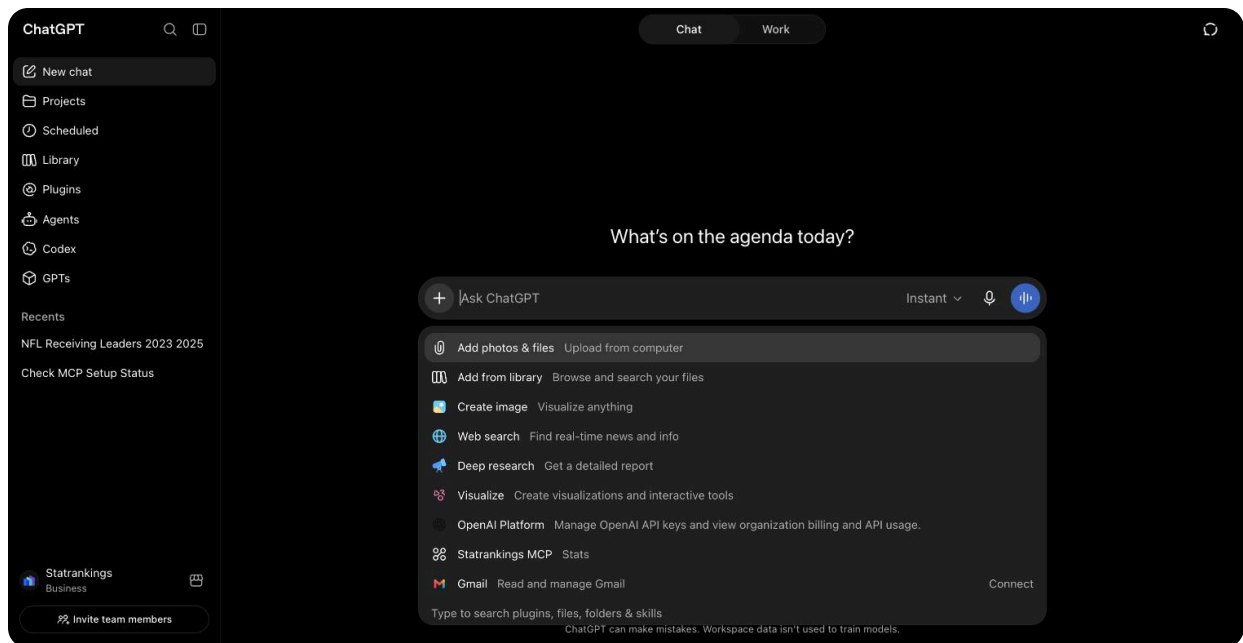

04 Sign in with your statrankings account

A **statrankings** sign-in window opens. Log in with your email & password (**the same email as your statrankings+ subscription**) & approve the connection. **statrankings** now appears under Installed on your Plugins page.

PART 2 Use it in a chat

05 Add statrankings to your message

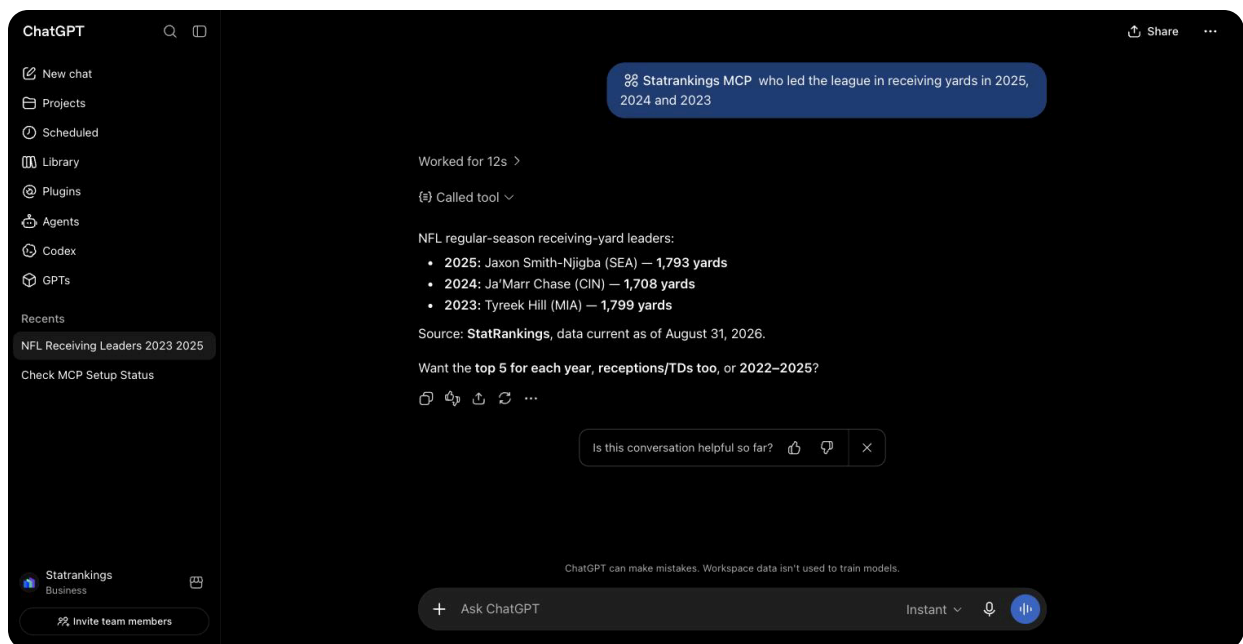

Start a new chat & click the + button in the message box. Pick **StatRankings** from the list (you can also start typing its name to filter).

The + menu in the message box: StatRankings appears alongside ChatGPT's built-in tools.

06 Ask your question

Type your question & send. ChatGPT calls **statrankings** automatically & answers with our data. A “Called tool” line above the answer confirms the numbers came from StatRankings.

A live example: league receiving-yard leaders, answered from **statrankings** data.

New tools don't appear automatically. ChatGPT reads a connector's tool list once and keeps it, so a tool we add later (such as **get_matchup_breakdown**, the weekly MagicSportsBreakdown, or **get_wr_cb**) won't show on a connector you added before it launched. To pick it up, open Plugins → Manage, choose your StatRankings connector and press **Refresh**; then switch on any newly listed action and start a **new chat**. If it still doesn't appear, remove the connector and add it again from step 03.

Troubleshooting: if ChatGPT reports it can't reach StatRankings, your session may have expired; open Plugins → Installed → StatRankings & reconnect. If no sign-in window ever appears, allow pop-ups for the site in your browser & connect again. If the + button never offered a custom connection, check that Developer mode is still on (step 01). If a tool you expect is missing, press **Refresh** on the connector and start a new chat (see the note above). If you see a subscription message, your **statrankings+** plan needs to be active; renew at statrankings.com/checkout.

PART 3 Before your first chat

STATRANKINGS+ SUBSCRIBERS

Get the AI playbook before your first chat

The connector gives your AI the **statrankings+** data. The AI playbook tells it how to work that data: which tools to use for each question, how to weigh usage, matchups & game environment, & how to answer with the numbers behind every call. Download it, give it to your AI, then ask the way you normally would.

[Download it at statrankings.com/ai](https://statrankings.com/ai)

08 Turn on Allow all tools

For the best **statrankings** experience, select "Allow all tools." This allows ChatGPT to use **statrankings** tools without repeatedly asking for approval. ChatGPT labels this setting "Elevated risk" because it permits automatic use of third-party tools. Only grant this permission to plugins you trust. Step by step on the next page.

09 Download the AI playbook

Go to statrankings.com/ai & sign in with the email on your **statrankings+** subscription.

10 Give it to your AI

Add the PDF to a project or custom instructions so every chat starts with it, or attach it to a new chat & send "Start here." For the best answers, use your plan's most capable model.

STEP 08 Allow all tools, step by step

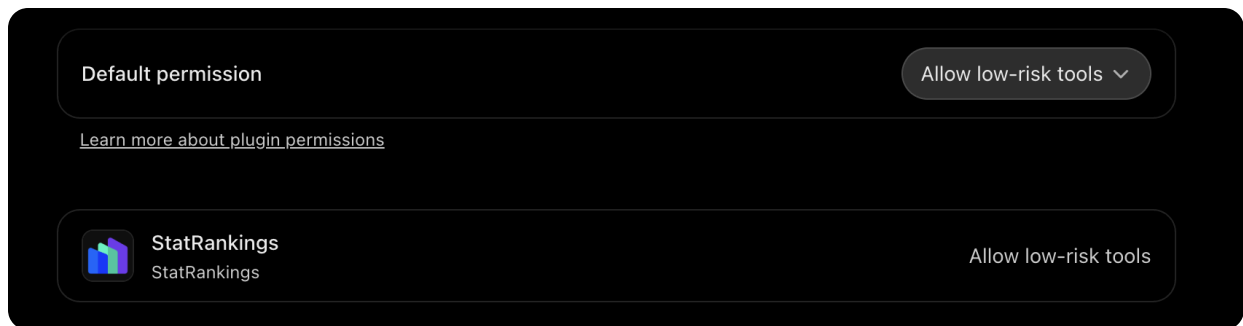

1 Open Plugins

In ChatGPT, open **Plugins** under Integrations.

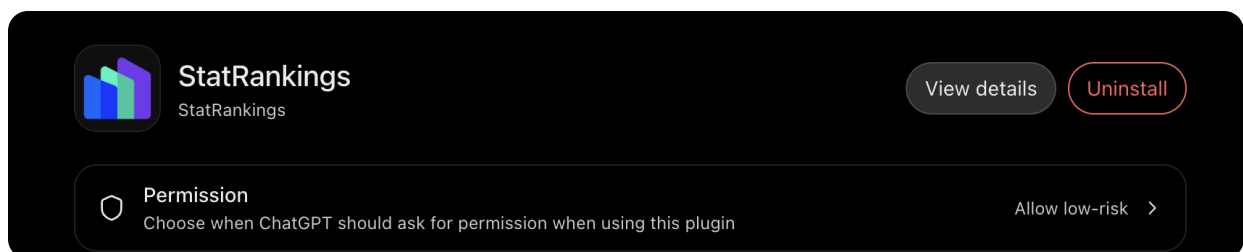

2 Select StatRankings

Under your installed plugins, click **StatRankings**.

3 Open Permission

On the StatRankings page, click the **Permission** row.

4 Choose Allow all tools

Select **Allow all tools**. ChatGPT marks it "Elevated risk"; only grant it to plugins you trust.

Permissions

Permissions

[Reset to default](#)

Choose when ChatGPT needs your approval to use tools

- ☐ **Always ask**
Ask before reading or making changes
- ☐ **Allow read-only tools**
Read without asking, but ask before making changes
- ☐ **Allow low-risk tools** Default
Automatically approve low-risk tools, but sensitive tools may be denied
- ☒ **Allow all tools** Elevated risk
Use tools without asking. This comes with elevated risk

[Learn more about plugin permissions](#)

5 Confirm

StatRankings now shows **Allow all tools** on your Plugins page.
